Company Profile

Correct Planning + Continue Follow Up + Action on Time = Achieve Success
We provide the perfect shape of the customers demand with needs & seeds

Our Philosophy

BEYOND YOUR EXPECTATIONS

Products and Services
for individual needs.

XCEED responds to more than what customers expect
— technique, quality, in every aspect — to add more value
to products.

Inventive Ideas
&

Advanced Technologies

The XTG series, our original Fully Automatic Grinding Machine,
enable the ever unmanageable processing of complex shapes
— precision finishing, edges/flashes removal, polish, cut etc.

Company Scope

FOUNDRY

Cast products are widely used in our daily lives, most commonly known as vehicle parts, machinery parts etc., which are indispensable to our modern lifestyle. XCEED designs, produces and delivers many kinds of foundry equipment in innovative technologies with the original ideas nurtured in Japan, the country of world-renowned technologies. XCEED is vigorously promoting Japanese high-quality products and services to the world.

XTG SERIES Fully Automatic Grinding Machine

XTG is the next generation deburring machine developed with quite new and unique concepts. The latest technology has achieved to integrate all customer's needs packed in one enclosure.

XTG makes it possible to materialize an efficient simultaneous finishing of multiple workpieces with the combination of a 6-axis robot and an indexing table.

Highly precise pre-programmed function of XTG can achieve the excellent finishing of complex shapes.

The grinding spindle motor with the floating system equipped on the robot arm provides highly consistent quality surface finishing.

DIAMOND WHEEL

The "Diamond Series" grinding wheel is designed for the XTG series. (Application : FC/FCV/FCD/SC/BC/AC).

XCEED Diamond Wheel is not only excellent in performance but also remarkable for long life which greatly helps to reduce the cost.

XCEED will select the most suitable wheel according to the customers' castings from our "Diamond Series" product lineup.

OTHER PRODUCTS & SERVICES

- Robotic deflashing/deburring equipment (For core sand and post-machining)
- Production of deflashing/deburring equipment fixtures
- Robot teaching
- Foundry layout planning, designing and manufacturing

IMPORT & EXPORT

Mainly between Japan and India in association with XCEED INDIA.

EXPORT SUPPORT

For any problems and challenges our customers may have when they try to expand overseas business, e.g. exporting Japanese goods/starting business in India/exploring international market etc., XCEED will provide assistance to find solutions that fit best for each customer.

XCEED offers a wide range of services to assist customers' business activities. For instance, XCEED will purchase customers' products then sell them to overseas buyers upon mutually agreed terms and conditions. Or, where customers already have business with foreign counterparts, XCEED can assist with domestic/international logistics including customs clearance.

IMPORT SUPPORT

Listening and thoroughly understanding customers' needs and requirements, XCEED will find foreign suppliers that best fulfill those and are satisfactory in terms of quality, price and reliability. Especially from India where XCEED has a strong network, we can provide our customers with good quality products as well as the most updated local information valuable for their businesses.

EXPORT/IMPORT TRADING

XCEED exports various foundry related equipment and products, not only our XTG series machines but also other Japanese industrial goods. XTG series and Sand Fresher, a foundry sand reclamation machine, are our leading products and we engage in promotional activities together with the manufacturers. (e.g. holding seminars/participating in exhibitions etc.)

As for import, we mainly procure rich minerals of all over the world directly from reliable manufacturers. (e.g. Silica Sand, Bentonite, Garnet Sand, Mica etc.)

INFRASTRUCTURE BUSINESS IN INDIA

India has been maintaining around 7% of economic growth for more than 10 years. According to JBIC (Japan Bank for International Cooperation), it has overtaken China and come on top of the prospective business-opportunity countries ranking. Meanwhile, India's middle class population is expected to grow up to 6.2 hundred million by 2020. Looking out to 2030 and beyond, the whole world is watching India's huge and promising market with great interest.

Current Japan-India export/import trading volume is, however, less than 1/10 of the Japan-China volume. This situation is attributed to the sheer lack of sufficient personnel who can bring companies of the two countries together to do business. XCEED takes on an active role to help this situation.

XCEED's activities encompass a wide range of business areas, responding to the requests of Indian ministries as well as private companies. (e.g. Researches on Japanese products, Japan-India business matching etc.) Recently, we have been participating in infrastructure-related enterprises conducted by Indian government authorities, such as interstate railways, drainage systems, solid waste management and so forth, the areas of business that are expected to grow further and quickly.

Message

Business Performance between Japan and India

Japan, with its excellence in technique and quality, and India, booming with prosperity as one of world's largest marketplace. It is my strong belief that the two countries have to help each other in future to contribute to industrial and economic developments.

XCEED was established in 2013, after more than twenty years of my experience of living in Japan and working for a trading company and a foundry equipment company to acquire skills, knowledge and experiences in factories, offices and domestic/overseas sales activities.

We are setting our focus particularly on business areas supported by "Monozukuri", Japanese high-standard manufacturing technology and work philosophy. Foundry is a great example of Monozukuri and that is where XCEED is originated from and is our core business area. We have developed XTG, the innovative fully automatic grinding machine, and introduced it to the industry as well as provided foundry-related products and services, all of which have been highly appreciated both in Japan and overseas.

Besides the foundry business, XCEED export many Japanese high quality products to India, and import natural resources from the world, mainly Indian minerals. We also participate in a very wide range of business activities, not only in the private sector but also public sector. XCEED takes part in India's national projects for infrastructure improvement by matchmaking Indian companies and good Japanese counterparts in the related areas, so as to help the country propel those projects forward.

Making full use of our experiences, techniques and worldwide connections, XCEED will serve our esteemed customers by providing fine products and services that swiftly respond to various needs and seeds of the times and, together with our customers and business partners, we will steadily advance and grow further towards the future.

PRESIDENT & CEO Sunil Sharma

OUR HISTORY

- 2013 XCEED Pvt. Ltd. is established in Nagoya, Japan
- 2014 XCEED launches the XTG series, Fully Automatic Grinding Machine
XTG series is introduced to international market
- 2015 XCEED introduces Sand Fresher, sand reclamation equipment, to international market
- 2016 XCEED starts Import/Export
XCEED participates in WFC (World Foundry Congress) and exhibits XTG machine and Sand Fresher
XCEED participates in IFEX (International Exhibition on Foundry Technology) for the promotion of XTG series and Sand Fresher
- 2017 XCEED launches XTG Double Stations
- 2018 XCEED INDIA is opened in Ahmedabad as Indian base
